"A mole is quite disturbing to have on your face which made me very uncomfortable being around people in public. I used DermaTend with high hopes of removing my mole like it said it will do, and BAM! My unsightly mole fell off after the 3rd application. No I did not give up after the 1st AND 2nd application, what with the FULL REFUND GUARANTEED offer - I just knew it will work. I can't thank you enough DermaTend you saved me a handful of money and increased my self esteem"

- Malleena M.

after

"I am amazed how well your product worked on my grandson's warts under the big toe. We didn't think it would work as there was no stinging or crusting as per the instructions. About 10 days later we thought we would try and treat it again and to our amazement the warts were GONE. Amazing! Will recommend to everyone"

Important Information

Directions

While some individuals will find results in just a few applications, the vast majority of our customers report that IT TAKES CLOSER TO 7-10 APPLICATIONS before complete removal is achieved, sometimes longer for more stubborn blemishes. Please apply NO MORE FREQUENTLY THAN ONCE PER 24-HOURS, and only re-apply once a scab has completely healed over.

Product Description

At twice the size of our Original formula, DermaTend Ultra is a NATURAL, extra-strength herbal formula that safely removes moles, warts & skin tags from your body, all in the convenience of your home. DermaTend works on all types of moles, warts & skin tags even the ones that you have had all of your life.

Using natural and organic ingredients, DermaTend penetrates to the root of the mole, wart, or skin tag. Your body works with this safe, powerful formula, leaving little chance of scarring and eliminating the skin growths ability to ever come back.

While some individuals will find results in just a few applications, the vast majority of our customers report that it often requires closer to 7-10 applications before complete removal is achieved, sometimes longer (up to several weeks) for more stubborn blemishes.

Please apply NO MORE FREQUENTLY THAN ONCE PER 24-HOURS, and only re-apply once a scab has fallen off naturally. Please DO NOT pick at scab, as it compromises the process.

There is ABSOLUTELY NO RISK to you, as Dermatend has proven effective for the vast majority of our customers, and for those who don't find successful removal of their blemishes, we ALWAYS OFFER OUR NO-QUESTIONS ASKED MONEY BACK GUARANTEE. Simply contact us with your request for a refund and once we receive the tracking info for your returned product, we will process a full refund immediately.

For removing moles, warts or skin tags DermaTend is the safest, fastest, and most effective natural method available. The truth is, IT JUST WORKS!

Take this final step to making a positive change in your life, and let your dream of Mole/Wart/Skin Tag FREE skin become reality. YOU DESERVE THIS!

After

Exhibit E1

"I've lived with this mole on my face my entire life. And as big as it was, it was not fun growing up. As I grew older people were mature enough not to say anything, but that never stopped them from looking at it while talking to me. It was embarrassing, but thank God I tried DermaTend.

It has truly changed my life. And best of all, you would never know the mole was there. I urge you to give it a try, you have nothing to lose."

Before Dermatend

After Dermatend

"Some time ago I purchased your product with the hope that it may change my life. I had a big mole on my face which I lived with for over 40 years. Just as you promised it is now gone. People don't stare at me anymore, and I get a smile now and again. Thank you very much. If you have anyone in doubt about your product I would be pleased to reassure them that it does work, and it is a gift for people who suffer from moles. Thanks again" Raymond S.

Facial Mole Removal

MARCH 27, 2013 BY ADMIN

What Are Facial Moles?

Moles are generally known by dark spots or irregularities found in the skin. They are found in different shapes & sizes. Moles can appear anywhere on the skin, from facial area to toe, as well as arms and chest areas, in groups or alone. They can be present by birth or can begin to appear over time during a life time. Some moles go unnoticed and some like facial moles "beauty marks" are actually considered attractive. However moles are annoying to some people and can even become dangerous health risks. Mole removal whether by laser or other surgery provides a solution to people wanting to improve their appearance by facial mole removal or other skin mole removal and reduce associated health risks.

Issues With Surgery:

With the ever increasing popularity of various cosmetic surgery procedures, like mole removal, it is very important that the patient should research and understand different issues like what the particular procedure can and cannot treat, inherent risks, costs and other factors. Keep in mind that cosmetic surgery is a surgical procedure whose results cannot simply be erased. When considering cosmetic procedure for facial mole removal we recommend that you consult a qualified doctor or specialist with significant experience in this field.

Mole Removal Introduction

Moles, or nevi, are generally removed for various reasons. They can be removed by 2 surgical methods:

- Excision (cutting) with stitches
- Excision with cauterization

Although laser has been tried for moles it is usually not preferred for deep moles because the laser light cannot penetrate deeply enough. Typically the doctor or dermatologist (a skin specialist) may choose excision with or without stitches depending on the depth of the mole and the type of cosmetic outcome desired.

The most common side effect of mole removal is a scar. Many people will attempt to remove moles for cosmetic reasons, not realizing that each and every removal of mole may produce a scar. Many times your surgeon can give you an idea of the type and location of a scar after mole removal before you make your decision about removal.

Reasons For Facial Mole Removal:

Mole removal is usually not necessary unless it is a facial mole which can look ugly. A stable, unchanging mole can be left alone, although it should be checked sporadically for changes. There are basically three main reasons why facial mole removal may be needed by someone:

- Presence of mole makes the person self-conscious especially if it is on face. A big mole on the face can be distressing. Multiple moles or prominent ones elsewhere on the body, can make a person feel unattractive.
- The mole is in a place where it's easily irritated like a man having a facial mole that constantly gets cut when he shaves will probably opt for facial mole removal.

The mole looks like it could be cancerous. Melanoma, a very serious type of skin cancer which can develop within a mole. Various other types of skin cancer can also look like moles. Any new growth in an adult, any mole that has changed in appearance, or any irregular or multicolored mole should be evaluated by a doctor.

CLINIC TESTED NATURAL MOLE REMOVER Mole Removal Cream Makes Surgery Obsolete!

WARNING: Surgery Is Not the Only Answer For Mole Removal!

I am sure from the pictures above you more than likely disapprove of surgery as the "only" option for mole removal. I really don't blame you, with surgery, the average cost per mole is between \$125 and \$150. The cost and brutality isn't the only downside either. Mole removal surgery never comes with a guarantee and the end result usually promises a hideous scar.

Surgery is no longer the only option for mole removal. Most dermatologists are only schooled in conventional ways. Natural remedies are rarely covered in school. This sad fact keeps dermatologists less informed to natural and more effective solutions like DermaTend Mole Remover.

Here's What You Can Expect With DermaTend

Mole Before Treatment

Mole With DermaTend

Mole Scabs In Just 8 hours!

DermaTend® Mole Remover Frequently Asked Questions

Q. I'm still a little skeptical, will this really work?

A. We understand your skepticism, and feel there is nothing wrong with it. We have given you all the information we can and can only tell you to make the choice that feels right to you. We also want to lessen your risk and make this decision easier by offering a 60 day money back guarantee. Everybody is different and results will vary. But if you give DermaTend® a fair shot, you will most likely succeed in the removing your moles.

Q. How Long Does The Removal Process Take?

A. Removing moles varies with each person. Though we have seen results on a mole in as little as 1-3 days, be prepared to use DermaTend® for a few weeks in some cases. Also, results don't mean healing time. Total time for healing should be expected at 3 weeks. Immune systems are different, and skin problems can be stubborn. Be patient and diligent with the remedy, and give it an honest try. Please don't try it for three days and then give up.

Here's What You Can Expect With DermaTend®

Mole Before Treatment

Mole With DermaTend®

Mole After 8 hours!

After 9 Days Healing Nicely

Day 25: No Trace of Mole!

Day 1-3

After applying DermaTend® to the mole a scab should form in its place. This can

happen overnight with just one application but results will vary.

Day 3-10

Scab should begin to heal and dry up and will fall off. Make sure to take care of the scab as removing it prematurely can increase total healing time.

Day 10+

The mole and scab should be gone leaving you with fresh new healthy skin and eventually no trace a mole ever existed!

Q. How Does DermaTend® Actually Work?

A. The good thing about natural mole, wart, and skin tag removal is that it can be done in the comfort of your own home.

When you apply DermaTend® to a mole the active ingredients will penetrate to the root. This will cause an immune reaction and the area should become slightly inflamed. Once inflamed a scab should form over the mole. The area should now be flat and the scab should heal in about 7 to 10 days. Allow the scab to fall off naturally to reveal fresh new mole free skin. Its really that simple!!

Q. Does DermaTend® Cause Any Scarring?

A. You have the best chance of no scarring, but with any healing process it may occur. However, you still have far less chance of scarring than you would with surgical methods. Take care of the mole during the removal process and it will heal as the body intends as fresh, beautiful skin. As with all scabs, do not pick it off, let it heal and fall off on its own, and you will have a good chance the skin will show no sign a mole was ever there.

Q. Does DermaTend® work on all moles?

A. Yes! DermaTend® will safely and effectively remove all types of moles, including flat, as well as raised moles.

Q. Can DermaTend® Be Used On The Face?

A. Yes, as with any other place on your body DermaTend® is effective on the face as well. You have to be prepared for the healing process and the possible scar that could result from the process. We would advise using the remedy on another area of your body first and getting comfortable with the removal process, before using it on the face. Stay clear of your eyes and other mucous membranes. Use on your face is at your own discretion, we are not liable for any scarring or adverse affects it may have.

Q. Is DermaTend® Safe For Children?

A. Yes, it can be used on children just as adults but parental supervision is needed. DermaTend® has no effect on normal tissue, but can be toxic if taken internally.

Q. Why Do You Offer Your 60 Day Guarantee?

A. We believe whole heartedly in the effectiveness of DermaTend®. We know what it has done for thousands of other people. We simply offer the guarantee to let you know we are confident in DermaTend®. In the rare case that it does not work, or perhaps someone decides that it is not for them, then we will gladly return their money.

Q. What is your refund policy?

A. Please click [HERE](#) for our Refund Policy.

Q. Why Does My Dermatologist Recommend Surgery?

A. Firstly, most dermatologists are only schooled in the conventional ways. They do not cover any natural remedies in school unless they choose to educate themselves on their own time. This sad fact keeps them ignorant to more pleasant and effective solutions. If you have any questions feel free to visit your dermatologist and see what he has to say about DermaTend®. Most will tell you that it is safe to use and worth a try.

Q. Is It Safe To Enter My Credit Card Information Online?

A. Yes, our payment process is encrypted with the latest technology. We assure you no one can get your information, as our merchant processor is one of the biggest and most secure in the business. They are certified members of the Better Business Bureau, and Verisign site secured. You can rest assured your credit card information is the safest on the net.

Ingredients: Sanguinera Canadensis, vegetable glycerine, zinc salts, distilled water.

What is DermaTend® Genital Warts?

DermaTend Genital Warts is a natural genital wart removal that has been created for eliminating these conditions. It is made from some of the natural ingredients that will not cause any side effect. DermaTend works effectively by penetrating the skin to deliver healing and killing of the viruses with natural agents.

DermaTend is a proven solution that has been helping thousands and thousands of users with its effective solutions.

What are DermaTend® Ingredients?

DermaTend's active ingredients are sanguinaria canadensis, vegetable glycerin, distilled water, and butter of zinc. It is a safe, herbal and organic formula that can help in combating genital wart symptoms. It is a quicker, safer and definitely a cheaper formula than most others. It is less expensive than the surgical procedures. Results are usually the same, but using DermaTend is risk-free while a surgery might have some risks.

How Does DermaTend® Work?

DermaTend Genital Warts is a topical wart treatment that should be applied on to the skin directly. Before the cream is applied, you must scrape the genital warts properly to form a scab. Once the scab is formed the cream can be applied. To ensure that the genital wart treatment with DermaTend works you have to follow all the directions precisely as it is mentioned on the label. You might even want to consider applying the same.

before after

For moles, skin tags, and warts, there are a number of home and over-the-counter remedies you can choose from – and then there's DermaTend. DermaTend is a powerful, yet all-natural treatment that safely and effectively removes moles, skin tags and warts without the need for painful and dangerous surgical procedures. It works by penetrating the skin to break down the excess tissue and dissolve it away, while at the same time boosting the immune system to kill any viral infections that may be present. DermaTend has been clinically tested and proven to work in most people.

[Visit The Official Website of Dermatend](#)

How quickly does it work?

DermaTend begins to work the moment you apply to your skin. In fact, users should feel a slight stinging sensation for the first 5 to 10 minutes – a signal that the product has penetrated the blemish and is hard at work. In most cases a scab will form overnight, and repeated uses will remove the blemish within 3 to 4 days. More stubborn cases may take up to a week or two to be completely healed. Obviously, results will vary depending on the size and type of your blemish and your skin's natural reaction to the product.

Is it DermaTend is safe?

DermaTend's all natural ingredients means it's safe for just about anyone to use. The product contains sanguinera canadensis, vegetable glycerine, mineral salts, distilled water and bloodroot; it doesn't contain any dangerous chemicals or synthetic substances that can cause skin damage or leave scars. All of DermaTend's ingredients have been scientifically proven to work together to remove your moles, skin tags, and warts.

What are customers saying?

DermaTend reviews abound all across the Internet and they are mostly positive. Of course, there are some negative reviews, because no product of this nature works for everyone. But by and large satisfied customers report completely clean and healthy skin within a few weeks, just as the product advertises. Many consumers testify of finding success with DermaTend after years of unsuccessful treatments using other products. Many claim that they will use it again as well is recommending it to their friends and family members.

Is DermaTend difficult to use?

My DermaTend Mole Removal Story

Where: My Neck

How Many Removed: 2

How? With DermaTend Natural Mole Remover

How long did it take: 3 days & 10 days

Scarring: None to minimal

Pain: None

I have removed two moles on my neck using DermaTend mole remover. I started with 4 moles on my neck. 2 more to go!

One of the moles scabbed overnight. The scab came off 3 days later! There was a little bit of pink/redness where the scab was, but this healed within several weeks and returned to normal skin color. (As would happen with any scab on your body)

The second mole took two nightly applications. That scab came off about a week and a half later revealing fresh skin.

I do believe that I accidentally knocked the scab that was only on for 3 days off when drying my hair with a towel. Guess I should have listened to the "keep a band aid on the area" instructions!

Well, I am just glad that **everything healed so wonderfully.** I have a very minimal mark left behind which is NOTHING compared to the large scar I have on my back from surgical removal.

Click the photos to see a larger view.

BEFORE

Exhibit J1

AFTER (2 TO GO!)

I'm excited! I'd like to try it!

By now I bet you are excited about the idea of getting rid of this blemish that has been bothering you.

I sure was!

So what are you waiting for?

Remove Warts - Your Options

Why remove warts?

Some people choose to live with their warts thinking that the removal of them will be more painful than the actual wart.

Others have very painful ones that make every day life difficult.

Whether they are painful or not, the truth is that they can be embarrassing and unattractive.

There are several methods for removing them which I will explain below.

Remove Warts by Freezing: This method works as follows. You apply liquid nitrogen to the wart. This creates a blister under and around the wart. The wart then "dies" and falls off within a week. This is not too incredibly painful; however, you may need multiple treatments for this to work.

Remove Warts with Surgical Removal: An injection is given to the area prior to the surgery. Then, an electro needle is inserted into the wart. This process can be very painful and is reserved for warts that do not respond to any other treatment method. This will most likely leave a scar.

Remove Warts with Laser Removal: This method is not as painful as surgery. It is also reserved for hard to treat warts as it can be very expensive and may require multiple sittings. There is also a chance of scarring with this method.

Remove Warts with Duct Tape: There have been several studies done on the use of duct tape for wart removal, and there is a lot of debate on if this method actually works. The basis is that the duct tape will suffocate the wart and gradually reduce dead skin cells from it. This method must be repeated daily and can take several weeks. Some people notice no difference at all. Some people may be allergic to the tape and there is a chance of infection with this method.

Remove Warts with Natural Remedies: There are several natural wart removal pastes out there. I will be talking about the one I know and trust, DermaTend. My aunt removed a wart she had in between 2 toes with it overnight, and my step mother removed one she had on the palm of her hand in several days. (Unfortunately they didn't take any photos!)

The process is simple. The wart is scratched with an emery board or toothpick to remove the top layer of dead skin.

The paste is then applied to the wart, covered with a band aid and left along for 24 hours.

The following day the paste is washed off. If a scab has formed in place of the wart, it is left along until it has fallen off naturally. If no scab has

formed, the process is repeated until one does.

There is a slight stinging felt for 5-10 minutes that lets you know the past is working.

This is not painful. I would say of all the methods (aside from duct tape which is iffy) this is the least painful witch also has the least chance of scarring!

Not only that, the company that sells DermaTend also sells Natural Boost to aid with the possibility of these warts returning.

Natural Boost is a natural immune booster that helps build your immune system. A healthy immune system makes it harder for the virus to be active and create new warts.

Used together for wart removal, this is BY FAR the best method. It can also be used on genital warts!

Decision Time

You don't have to live with your warts. You don't want to be worried about shaking somebody's hand, or having to keep socks on in shared spaces.

Get rid of your warts!

But, be sure to get rid of them internally as well. Boosting your immune system is very necessary for this!

Whatever you choose...good luck!

If you would like to find out more about how DermaTend works to [Remove Warts](#) please visit their website by clicking on the included link or on the photo below.
